

Six Steps to Stop the Spread.

You can stop the spread and keep safe by following ALL six steps

1. Are you feeling well?

You must stay home if you are feeling unwell, even if your symptoms are mild. Contact a doctor or respiratory clinic and seek advice. Tell them you are an aged care worker. COVID-19 testing is available for all aged care workers. The symptoms of COVID-19 can be like a cold or flu and can include:

- fever
- cough
- shortness of breath
- sore throat
- headache
- loss of smell
- loss of taste
- runny nose
- muscle pain
- joint pain
- diarrhoea
- nausea/vomiting
- loss of appetite

2. Have you stayed away from people who are unwell?

You must stay home if, in the past 14 days, you have:

- had contact with someone with COVID-19 and were not wearing appropriate PPE or
- returned from overseas.

You should be in quarantine or isolation. Contact your employer or manager. Do not go to work. If you have symptoms, even if they are mild, seek medical advice. Let them know you are an aged care worker.

3. Is your flu vaccination up to date?

If you work in residential aged care you must be vaccinated against the flu. We strongly encourage home care workers to have a 2020 flu vaccination.

4. Have you washed your hands?

You should wash your hands with soap and water for at least 20 seconds. If your hands are not visibly soiled you can use alcohol-based hand sanitiser. You need to wash your hands thoroughly:

- before you start work
- before and after each episode of contact with a person you are caring for
- after contact with potentially contaminated surfaces or objects
- at regular intervals throughout the day

5. Have you completed COVID-19 training for aged care workers?

There are free online training modules designed to help you:

- understand COVID-19
- spot the signs and symptoms
- keep yourself and others safe

You can find the training modules online at: <https://covid-19training.gov.au>

You should undergo regular refresher training on infection prevention and control measures.

6. Do you know how and when to use PPE?

Personal Protective Equipment (PPE) is important to keep you safe while you are working.

You need to follow your state and territory directions for using PPE.

PPE should be worn when you are caring for someone:

- with a confirmed or suspected case of COVID-19
- who is in quarantine

Put on the PPE before you enter the person's room or home. Talk to your employer or manager if unsure. Watch the PPE video and read the flowchart for PPE use in aged care, under COVID-19 Resources at health.gov.au.
